# KOREAN WOOD TO CAPTURE THE WORLD

The civilization of mankind started from nature. It was at a great riverside where mankind first created the civilization. In addition, the foundation of what we call civilization and culture is made of earth, water, wood, iron, etc. Earth and water became bricks to build a palace and a cathedral, and wood became a house as the ground of life or became books as the foundation of intellect. Iron determined the important moments of history sometimes with weapons and sometimes with cars and airplanes. Mankind has been dependent on nature and will be in the future to move forward.

In modern society where much of our lives became disconnected with nature, wood is gaining attention as a material which offers the serenity and inspiration of nature. There are lots of quality wood in the world, but Korea offers excellent wood and wood products.

## 2016 Korea Forest Service Competition for Export-Promising Wood Products

2016 Korea Forest Service Competition for Export-Promising Wood Products was held in order to find companies which produce excellent wood products in Korea and support them to go into overseas markets. 114 items from 74 companies were submitted for the competition; small-sized items accounted the most with 63 items in total along with 18 furniture and processed wood, 9 toys, 4 kitchen utensils, and 2 exercise equipment. The assessment standard for the competition were: 40% for export compatibility, 20% for creativity, 20% for design, and 20% for completeness. The assessment was carried by six professional judges. As a result, a total of 8 wooden products were selected.

## Awarded Items

GaOn Wood Co. Ltd.,  
Chonbuk National  
University Eco-Housing  
YoungLim Industry Co.,  
Ltd.  
NF INDUS Co., Ltd.  
ShinYoung Wood Co., Ltd.  
SK Forest Co., Ltd.  
Happy Home Wood  
Tech Co., Ltd. Bauhaus  
DongRim Co., Ltd.

## INTRODUCTION OF AWARDED ITEMS

# FIREPROOF WOOD

## Sound-Absorbing and Fire-Retardant Wood Property for Interior, Ceiling, and Wall

### Grand Prize

Optimum interior finish material with fireproofing, flame-retardant, and sound-absorbing properties GaOn Wood Co., Ltd. succeeded in the developing fire-retardant technology by injecting functional resin evenly with speed in bored holes on wood. The wood has an excellent sound absorption function due to the holes.

### State-Recognized Technology

This technology won a patent and was designated as a national new technology (NET) for wood products in 2016 in accordance with the Act on the Sustainable Use of Wood.

### Excellent Economical Efficiency

It has overcome the disadvantages of wood as an interior material because it is less affected by temperature and humidity. In addition, it has a good economical efficiency because it can be easily applied to various environments and circumstances due to its light weight, durability, water resistance, dimensional stability.

## GaOn Wood Co. Ltd., Chonbuk National University Eco-Housing

GaOn Wood Co., Ltd. has developed the flame-retardant wood in collaboration with a team led by Prof. Park Hee-Joon, the professor in Housing Environment Dept. in Chonbuk National University. The company has strived for sound-absorption technology to prevent interlayer noise as well as flame-proofing and flame retardant properties. The wood manufactured by GaOn Wood Co., Ltd. is now widely used in educational institutions including kindergartens, elementary and junior, senior high schools and indoor environments of public facilities such as hospitals, auditoriums, and theaters.

# BEAUTIFUL SPACE MAKES A BEAUTIFUL LIFE

## Style Wall (Wall Panel)

### Style Wall (Wall Panel)

Basic line, which is the basic product line, uses German eco-friendly pattern with low heavy metal content and is processed in the LPM method. The glossy line is safe to use because the panel is processed in the LPM method with eco-friendly odorless paint. The basic panel uses the E0 grade eco-friendly HDF with formaldehyde less than 0.5 mg/L.

**LPM (Low-Pressure Melamine) method** A method of attaching the pattern dried after infiltrating melamine resin to a panel with heat and pressure.

**HDF (High-Density Fibreboard)** High-density wood material increased in density compared to the common medium density fibreboard (MDF).

### Easy Maintenance and Management

HDF is a high-density material that has an advantage of ease of putting a nail and holding it stronger compared to wood materials such as MDF. Thus it can be used more conveniently in everyday life. The LPM method is easy to maintain the initial state because the surface is strong against dirt and scratch. In addition, the surface is smooth so it can be applied immediately without any additional processing like sanding which will increase work efficiency with benefits of customizing into a wanted space.

## YoungLim Industry Co., Ltd.

YoungLim Industry Co., Ltd. is located in Namdong Industrial Complex in Incheon, one of the representative industrial complexes in Korea. Since its foundation in 1984, it has been specialized solely in interior materials for more than 30 years believing in the value of 'a beautiful space makes a beautiful life'.

# INTERIOR DESIGN, HEALTHY AND BEAUTIFULLY

## NF Embo Board

### Quick and Easy Application

The application can be made quickly and easily. Because it is plywood, no other work is required when cutting and tacking. It is easy to cut and bond, so it can be applied to all sites.

### Excellent Texture and Eco-Friendliness

It has an excellent interior material as it varies in color and texture to satisfy an interior designer involved in cutting and application. In addition, since the wood work is a finishing work, the application time can be shortened. It is also safe because it uses plywood which is proven to be eco-friendly.

### Easy Finish

Oil stain and water-based paint have good reactivity and the color of the existing wood pattern clear, so the finish is done at once with oil stain. They also have their own colors, so if one uses several different colors, the finish can be done only with transparent oil stain.

## NF INDUS Co., Ltd.

NF INDUS Co., Ltd. has caught two rabbits of natural and stereoscopic properties in the field of interior design based on the wood material. It is the latest trend of developed countries to keep and transfer the natural atmosphere and feeling of wood rather than simply using the wood. To achieve this, various attempts were made to give a three-dimensional effect to the wood finish; the company succeeded in developing the NF Embo board.

# TREND CAUGHT UP WITH TECHNOLOGY

## Flame-Proofing, Flame-Retardant and Quasi-Uninflammable Wood

### Technology for Flame-Retardance

Wood manufactured by ShinYoung Wood Co., Ltd. prevents the fire from spreading by injecting the eco-friendly water soluble flame-retardant resin evenly into wood or plywood. This results in the formation of a carbonized layer which blocks oxygen when ignited. At the same time, it has an excellent fire-resistant property which does not generate gas.

### Technology Proven by Patent

Regarding the technology, three patents are owned by Shinyoung Wood Co., Ltd.; a patent on permeation pressure control devices of water-soluble flame retardant liquid impregnated into the wood, a patent on the manufacturing method of flame-retardant wood, and a patent on dimensional stability of wood and the processing method for improving flame retardancy. The company received a certification of the Korea Fire Equipment Inspection Corporation for its uninflammable, quasi-uninflammable and flame-retardant materials.

## ShinYoung Wood Co., Ltd.

Since its foundation in 1994, ShinYoung Wood Co., Ltd. has been producing industrial packaging boxes, pallets, and interior Hinoki cypress wood for over 20 years. In recent years, the company challenged itself to come up with a technology for quasi-uninflammable and flame-retardant wood, which are the trends in the technology-intensive wood processing field of construction and shipbuilding and achieved good results in a short time.

# THE TALE OF NUTCRACKER DOLL

## Hand-Made Nutcracker

### Fun of Cracking and Warm Sensibility

The principle is simple. Put the walnut in the circular opening shown in the front, rotate the head of the doll, rotate the screw, and the walnut shell is broken. It is not only fun to eat, but also fun to crack and play with a toy, so it may be killing two birds with one stone. It is easy to use for children and the doll has been trimmed to have no corners or angles for safety. It used the high-class raw lumber for design purpose – a complete combination of an artistic sense of a young designer and a finish of a skilled craftsman.

### Fresh Walnuts and Nutrition in a Natural State

Originally, nutcrackers were developed to inform the proper method for taking nuts. The rancidity begins instantly when a walnut is exposed to oxygen when the greasy walnut shell is cracked. Thus if you keep a walnut in a cracked state for a long time, the taste and nutrition are not as good as freshly cracked one. The nutcracker doll is a tool to enjoy the walnuts at its best taste and nutrition.

## SK Forest Co., Ltd.

Since 1974, SK Forest Co., Ltd. has made great efforts to increase the added value of domestic walnuts by continuing the reputation of domestic native walnuts in Mt. Gwangdeok, Cheonan, the chief walnut producing region of Korea. In addition, to produce safe food through eco-friendly cultivation, The company is working on strengthening the brand identity through the 'Walnuts in Our Forest', which is the Cheonan walnut specialty brand launched in 2003 as well as the production of safe foods through eco-friendly cultivation.

# HAPPINESS IS BASED ON SAFETY

## Flame-Proofing, Flame-Retardant, Quasi-Uninflammable Processed Wood and Plywood

### The natural beauty of wood is kept intact

In the past, imparting the functions of flame-proofing and flame retardancy to wood was mainly done by coating flame-proofing and flame-retardant paint on the wood surface. This, however, offsets the advantage of the natural beauty and fragrance of wood along with its ability to control temperature and humidity. Happy Home Wood Tech Co., Ltd. has added the functions of flame-proofing and flame retardancy while preserving the natural beauty and the characters of wood.

### Eco-friendly Water-Soluble Flame-Retardant Resin

The core technology is eco-friendly water-soluble flame-retardant resin. The injection of this resin into wood can dramatically raise the level of flame-proofing and flame retardancy while maintaining the strengths of wood. There is also an effect of shortening process time since no additional flame-retardant treatment is required after application. Neverning in Happy Home Wood Tech Co., Ltd. is a synonym for 'Never Burning Wood', and it is a product to enable the flame-retardant treatment with the application. The product does not use any thinner or lacquer, so its safety is guaranteed as harmful ingredients are hardly detected.

## Happy Home Wood Tech Co., Ltd.

Happy Home Wood Tech Co., Ltd. has obtained the quality certification and KS certification of dried sawn-wood and has been widely recognized for technology with obtaining the national new technology NET, the performance certification by the Small & Medium Business Administration, and the excellent product certification by the Public Procurement Service. It is a company with state-of-the-art technology of today where fire safety regulations are ever strengthening and the preference for eco-friendly wood is increasing.

# KEYWORDS OF DAILY LIFE AND FUN

## Bauhaus Miniature (Cafe)

### Wood into Daily Life Space

We are working to locate wood in a familiar space in daily life by establishing design on the wood. We manufacture small wooden interior design items such as a nameplate, a parking number plate, a clock, and other simple interior designs making it possible to meet and feel wood in everyday life.

### Fun and Meaning of Touching and Playing with Wood

As seen in the awarded Bauhaus Miniature Café, the Bauhaus miniature series is a product to share the fun of playing with wood, feeling the texture and fragrance of it rather than focusing on the function. It emphasizes the fun and meaningfulness in touching and playing with it. In addition to the cafe, miniatures of daily space for cats and dogs, mobiles and clocks, drawers, kitchens, fridges, and tables are made of wood.

## Bauhaus

Bauhaus manufactures and sells the miniatures and wooden nameplates. The miniatures are sold as a kit which are products of work of EO grade MDF laser cutting, then go through safety inspection. Bauhaus miniatures are loved for its educational benefits – a user is able to involve in the process of assembly with painting while following the user manual.

# POSSIBILITY AND FUN OF WOODEN BRICKS

## Eco-Friendly Wooden Bricks

### Synergy of Naturalness of Wood and Convenience of Brick

The greatest advantage of a wooden brick is that it has strengths of both brick and wood; ease of assembly of brick combined with the beauty and functions of humidity maintaining, noise-absorbing, insect-proofing, and environmentally-friendly wood. The wooden bricks can be stacked according to the desired shape and then fixed by inserting wooden pins into the holes in bricks. Thanks to its simple steps, people of all ages and men and women can work easily.

### Eco-Friendliness of Local Larch

Wooden bricks of DongRim Co., Ltd. are made from local larch. They are eco-friendly natural materials because no additional chemicals are added. There is no need to worry about sick house syndrome, and one would feel as if he/she is taking a forest bath. By using eco-friendly paint on the material, users can express their unique beauty. Thanks to these features, they can be used in various places including partitions, information desks, aquariums, etc.

## DongRim Co., Ltd.

DongRim Co., Ltd. is a company which produces eco-friendly wooden bricks with locally sourced materials. It pursues a beauty with the practical and aesthetic constructions with over 30 years of accumulated know-how and technologies. Health and environment are the cherished values in the company.
